

* Adding two Arrays :

Eg:

0	1	2	3	4
2	1	3	5	4
0	1	2	3	4
3	5	4	2	1

→ arr1
(n1 = 5)

→ arr2
(n2 = 5)

#1: Carry not handled

```
const res = [];
for(let i = n-1; i >= 0; i--) {
    res[i] = arr1[i] + arr2[i];
}
```

Eg:

0	1	2	3
4	3	5	2
0	1	2	3
6	9	7	4

→ arr1

0	1	2	3
10	12	12	6
0	1	2	3
10	9	7	4

→ arr2

* wrong according to 1st code.

```
const res = [];
```

```
let carry = 0;
```

```
for(let i = n-1; i >= 0; i--) {
```

```
    const sum = arr1[i] + arr2[i] + carry;
```

```
    res[i] = sum % 10;
```

```
    carry = sum / 10;
```

}

#2: Handling carry .

```
const res = [];
```

```
let carry = 0;
```

```
for (let i = n - 1; i >= 0; i--) {
```

$$\text{const sum} = \text{arr1}[i] + \text{arr2}[i] + \text{carry};$$

$$\text{res}[i] = \text{sum} \% 10;$$

$$\text{carry} = \text{sum}/10;$$

```
}
```

```
if (carry == 1) {
```

add "1" to beginning/start
of the array

```
}
```

0	1	2	3
4	3	5	2

$\rightarrow \text{res}$

0	1	2	3	4
1	1	3	2	6

$\rightarrow \text{res}$

0	1	2	3
4	3	5	2

$\rightarrow \text{arr1}$

0	1	2	3
6	9	7	4

$\rightarrow \text{arr2}$

0	1	2	3
1	3	2	6

$\rightarrow \text{res}$

$$\text{carry} = \emptyset \mid$$

① $i = 3$

$$\begin{aligned}\text{sum} &= 2 + 4 + 0 \\ &= 6\end{aligned}$$

$$\text{res}[3] = 6 \% 10 = 6$$

$$\text{carry} = 6/10 = 0$$

② $i = 2$

$$\begin{aligned}\text{sum} &= 5 + 7 + 0 \\ &= 12\end{aligned}$$

$$\text{res}[2] = 12 \% 10 = 2$$

$$\text{carry} = 12/10 = 1$$

③ $i = 1$

$$\begin{aligned}\text{sum} &= 3 + 9 + 1 \\ &= 13\end{aligned}$$

$$\text{res}[1] = 13 \% 10 = 3$$

$$\text{carry} = 13/10 = 1$$

④ $i = 0$

$$\begin{aligned}\text{sum} &= 4 + 6 + 1 \\ &= 11\end{aligned}$$

$$\text{res}[0] = 11 \% 10 = 1$$

$$\text{carry} = 11/10 = 1$$

$$\begin{aligned}\text{const sum} &= \text{arr1}[i] + \text{arr2}[i] \\ &\quad + \text{carry};\end{aligned}$$

$$= 9 + 9 + 1$$

$$= 19$$

carry > 1 not possible

Eg:

i
↓

0	1	2	3
9	9	5	2

$\rightarrow \text{arr}(n1=4)$

-1

9	6
0	1

$\rightarrow \text{arr2}(n2=2)$

↑

0	1	2	3
0	0	4	8

$\rightarrow \text{res}$

① $i = 3, j = 1$

Sum = $9 + 6 + 0 = 8$

res[3] = $8 \% 10 = 8$

Carry = $8 / 10 = 0$

② $i = 2, j = 0$

Sum = $5 + 9 + 0 = 14$

res[2] = $14 \% 10 = 4$

Carry = $14 / 10 = 1$

③ $i = 1, j = -1$

Sum = $9 + 1 = 10$

res[1] = $10 \% 10 = 0$

Carry = $10 / 10 = 1$

④ $i = 0, j = -2$

Sum = $9 + 1 = 10$

res[0] = $10 \% 10 = 0$

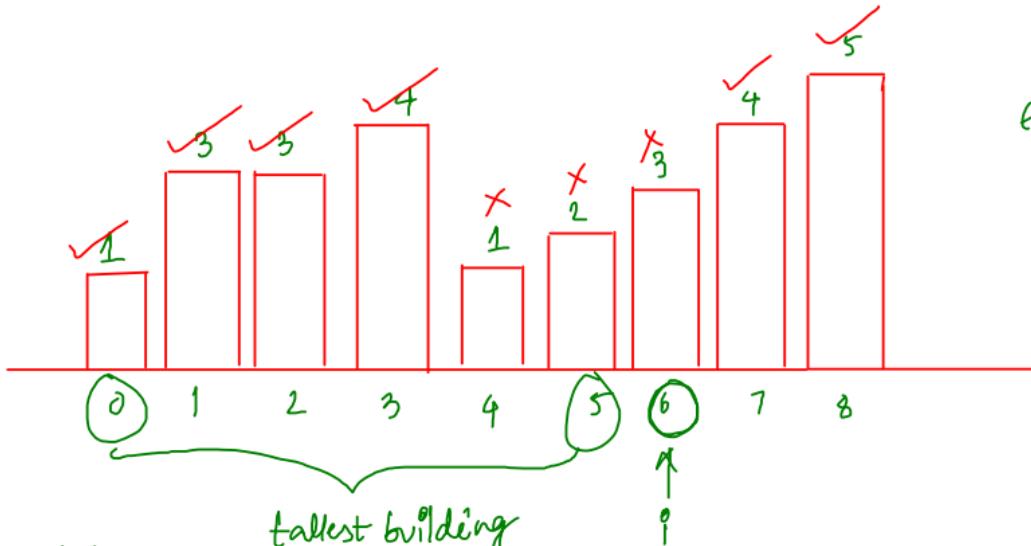

Carry = $10 / 10 = 1$

let $i = n1 - 1;$ if (carry == 1) {
 let $j = n2 - 1;$ add "1" to beginning/start
 let carry = 0; of the array
 while ($i >= 0$) { }
 let sum;
 if ($j >= 0$) sum = arr1[i] + arr2[j] + carry;
 else sum = arr1[i] + carry;
 res[i] = sum % 10;
 carry = sum / 10 * Iterate based
 i--; on bigger array,
 j--; (we assume $n1 \geq n2$)

}

⑤ $i = -1, j = -3$ ($i >= 0$)

* Buildings:

* How to decide whether you can see a building or not!

$$\text{tallest building} = (4)$$

→ checking with just previous element is not sufficient.

Eg: say you see arr[6] = (3)
 $3 < 2 \Rightarrow \text{NO}$
 → I can see X

```

let cwt = 0;
for(let i=0; i < n; i++) { ↗ how to get this
    if (arr[i] >= tallest building arr[0...i-1]) {
        cwt++; // I can see
    }
}

```

Running Stream / Carry forward Technique :

- keep track of max element until the current index, running Max^{imun}.
- * Can be applied in many problems, variations might include : running Min, running sum, running Product.

0	1	2	3	4	5
[1, 3, 3, 4, 1, 2]					

$$\text{runningMax} = -\infty \times 4$$

$$\textcircled{1} \quad i=0,$$

* what is the max till on my left? $\Rightarrow \text{runningMax} \neq -\infty$

follow find max logic,

$$1 > -\infty, \text{rm} = 1$$

$$\textcircled{2} \quad i=1,$$

* max on left $\Rightarrow \text{rm} \Rightarrow \textcircled{1}$

$$3 > 1 \Rightarrow \text{rm} = 3$$

$$\textcircled{3} \quad i=2,$$

* max on left $\Rightarrow \text{rm} \Rightarrow \textcircled{3}$

$$3 > 3 \times$$

$$\textcircled{4} \quad i=3$$

* max on left $\Rightarrow \text{rm} \Rightarrow \textcircled{3}$

$$4 > 3 \Rightarrow \text{rm} = 4$$

$$\textcircled{5} \quad i=4$$

* max on left $\Rightarrow \text{rm} \Rightarrow \textcircled{4}$

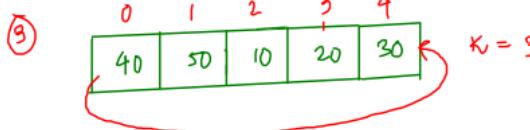

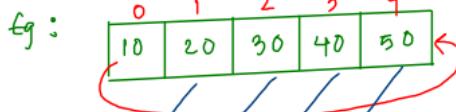

$$1 > 4 \times$$

$$\textcircled{6} \quad i=5$$

* max on left $\Rightarrow \text{rm} \Rightarrow \textcircled{4}$

$$2 > 4 \times$$

* Rotate Array :

$k=0,$	10	20	30	40	50	←
$k=1,$	20	30	40	50	10	←
$k=2,$	30	40	50	10	20	←
$k=3,$	40	50	10	20	30	←
$k=4,$	50	10	20	30	40	←
$k=5,$	10	20	30	40	50	←
$k=6,$	20	30	40	50	10	←
$k=7,$	30	40	50	10	20	←
$k=8,$	40	50	10	20	30	←
$k=9,$	50	10	20	30	40	←
$k=10,$	10	20	30	40	50	←
$k=11,$	20	30	40	50	10	←

* Find $k = 100 ?$

10	20	30	40	50
0	1	2	3	4

→ you need not rotate one by one.
→ think smart,

$k \% n$

$k = 0, 5, 10, 15, 20, 25 \rightarrow 0$

$k = 1, 6, 11, 16, 21, 26 \rightarrow 1$

$k = 2, 7, 12, 17, 22, 27 \rightarrow 2$

$k = 3, 8, 13, 18, 23, 28 \rightarrow 3$

$k = 4, 9, 14, 19, 24, 29 \rightarrow 4$

⇒ given k , answer for $k \% n$
 $100 \% 5 = 0$

⇒ $k = 9298, 9298 \% 5$
 $= 3$

⇒ Now you know that
given K, we find K%n.

$$\text{arr} = [10, 20, 30, 40, 50], \quad k = 3$$

① reverse entire array,

$$[50, 40, 30, 20, 10] \\ \begin{matrix} 0 & 1 & 2 & 3 & 4 \end{matrix}$$

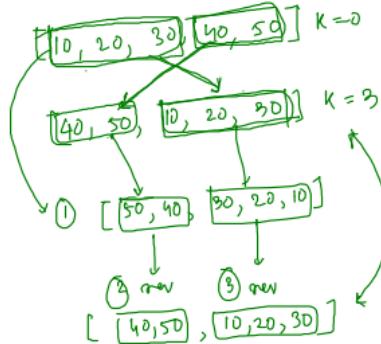

② reverse first $n-k$ elements

$$n-k = 5-3 = 2$$

$$[40, 50, 30, 20, 10]$$

③ reverse last k elements ($K=3$)

$$[40, 50, 10, 20, 30]$$

```
function reverseArr(arr, s, e) {
```

/+
code

}

```
function rotateArr(arr, k) {
```

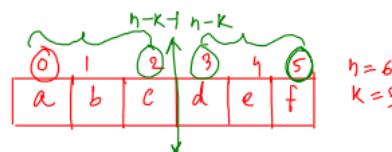

$$K = k \% n;$$

```
reverseArr(arr, 0, n-1);
```

```
reverseArr(arr, 0, n-K-1);
```

```
reverseArr(arr, n-K, n-1);
```

}

$$\textcircled{1} \quad s=0, e=n \Rightarrow s=0, e=n-1$$

$$\textcircled{2} \quad n-K=6-3=3 \Rightarrow s=0, e=n-K-1$$

$$\textcircled{3} \quad s=n-K, e=n-1$$
